

Hybrid learning is a fantastic way to ensure that professionals continue developing new skills, without losing their productive hours and businesses should take advantage of this innovation.

- Jay Bavisi, President & CEO of EC-Council Group

The pandemic forced countless businesses to adapt to the virtual environment quickly. As a result of this unexpected shift, scores of unprepared organizations have been exposed to potential threats causing the rapid escalation of cybercrime. Cybersecurity training is more critical than ever, with an amplified need students and professionals both to learn the latest skills. But training individuals in cybersecurity is only one piece of the puzzle. Since most cyber-attacks are attributed to human error, cybersecurity awareness is also essential. Without these key components, both businesses and individuals are at risk.

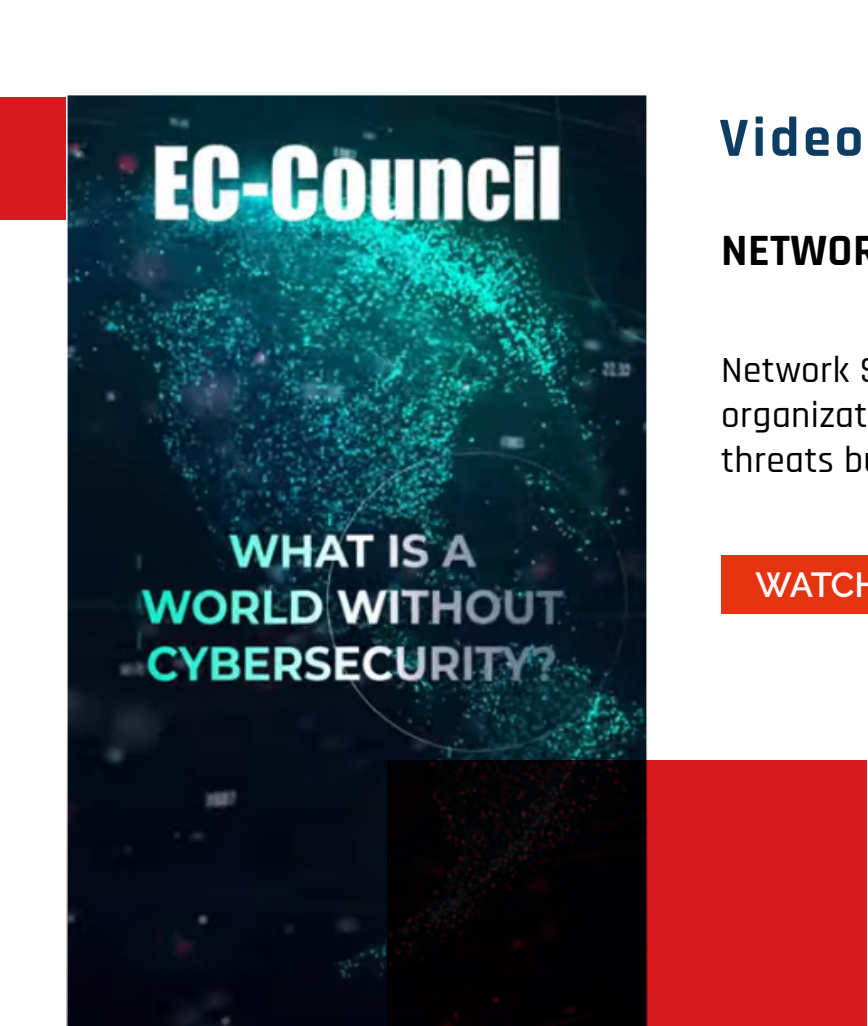

It falls upon each of us to stay informed on the current developments in the cybersecurity landscape and encourage a culture of shared responsibility. And that starts with security awareness.

With the Cyber Brief initiative, EC-Council seeks to equip individuals and organizations with the knowledge to mitigate risks in the digital age. The August-21 edition of Cyber Brief covers everything new in cybersecurity, and we hope you find these resources valuable and thought-provoking.

As cybersecurity leaders, we have to create our message of influence because security is a culture and you need the business to take the place and be part of that security culture.

-Biboy Hammarzham,
Director Cyber Operations, Cardinal Health
